

TENSORORBIT EDA BOOTCAMP

DAY 3 - STUDENT EDA CAPSTONE CHECKLIST

Team Name: _____

Dataset: _____

Team Members: _____

Main Business Question: _____

1. Understand the Dataset

- ☐ Load the dataset successfully in Google Colab.
- ☐ Use `head()`, `shape`, `columns`, `info()` and `describe()` to inspect the data.
- ☐ Identify which columns are categorical, numerical and date-related.
- ☐ Write at least one clear business question to investigate.

2. Clean the Data

- ☐ Check for missing values using `isnull().sum()`.
- ☐ Check for duplicate rows using `duplicated().sum()`.
- ☐ Handle missing values where appropriate and explain your choice.
- ☐ Remove duplicate rows if needed.
- ☐ Check for unusual values or possible outliers.

3. Explore and Analyse

- ☐ Use filtering, sorting or `groupby()` to answer business questions.
- ☐ Use suitable NumPy statistics such as mean, median, standard deviation or percentiles.
- ☐ Check relationships between useful numerical variables when relevant.
- ☐ Compare categories, locations, customer groups or other important segments.

4. Visualise the Findings

- ☐ Create at least 2 useful visualisations.
- ☐ Choose chart types that match the question (bar, histogram, scatter, boxplot, etc.).
- ☐ Add clear chart titles and axis labels.
- ☐ Be ready to explain what each chart means - not only how it was created.

5. Record Your Main Findings

Finding 1: _____

Finding 2: _____

Finding 3 (optional): _____

6. Business Recommendation

Recommendation: _____

Reason based on your analysis: _____

7. Day 4 Presentation Ready?

- ☐ We can explain our dataset and business question.
- ☐ We can show 2-3 main findings with supporting evidence/visualisations.
- ☐ We have at least one clear recommendation.
- ☐ We can present our findings and recommendation in about 3-5 minutes.

Remember: Code is the tool. Your findings and recommendation are the result.
